

Medbelle OS:

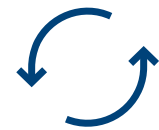

built with consultants and practice managers, for consultants and practice managers.

Everything
you need,
in one place

Practice Management Basics

21st century version of a traditional practice management system, including the essentials like billing, smart patient record management, intelligent diary module, document storage, as well as more advanced features.

Consultant Workflow Automation

Saving you time and money with smart and automated features like dictation enabled clinic letter, fully integrated diagnostic imaging transfer and healthcode, patient app with video support and pricing.

Practice Growth

Helping to grow revenue, attract new patients with dedicated phone numbers and online clinician profiles, and track where new patients are coming from.

Value-Based Care Data

Improving patient outcomes and experience by making data collection easy and presenting it intelligently via integrated dashboards.

Medbelle Integration

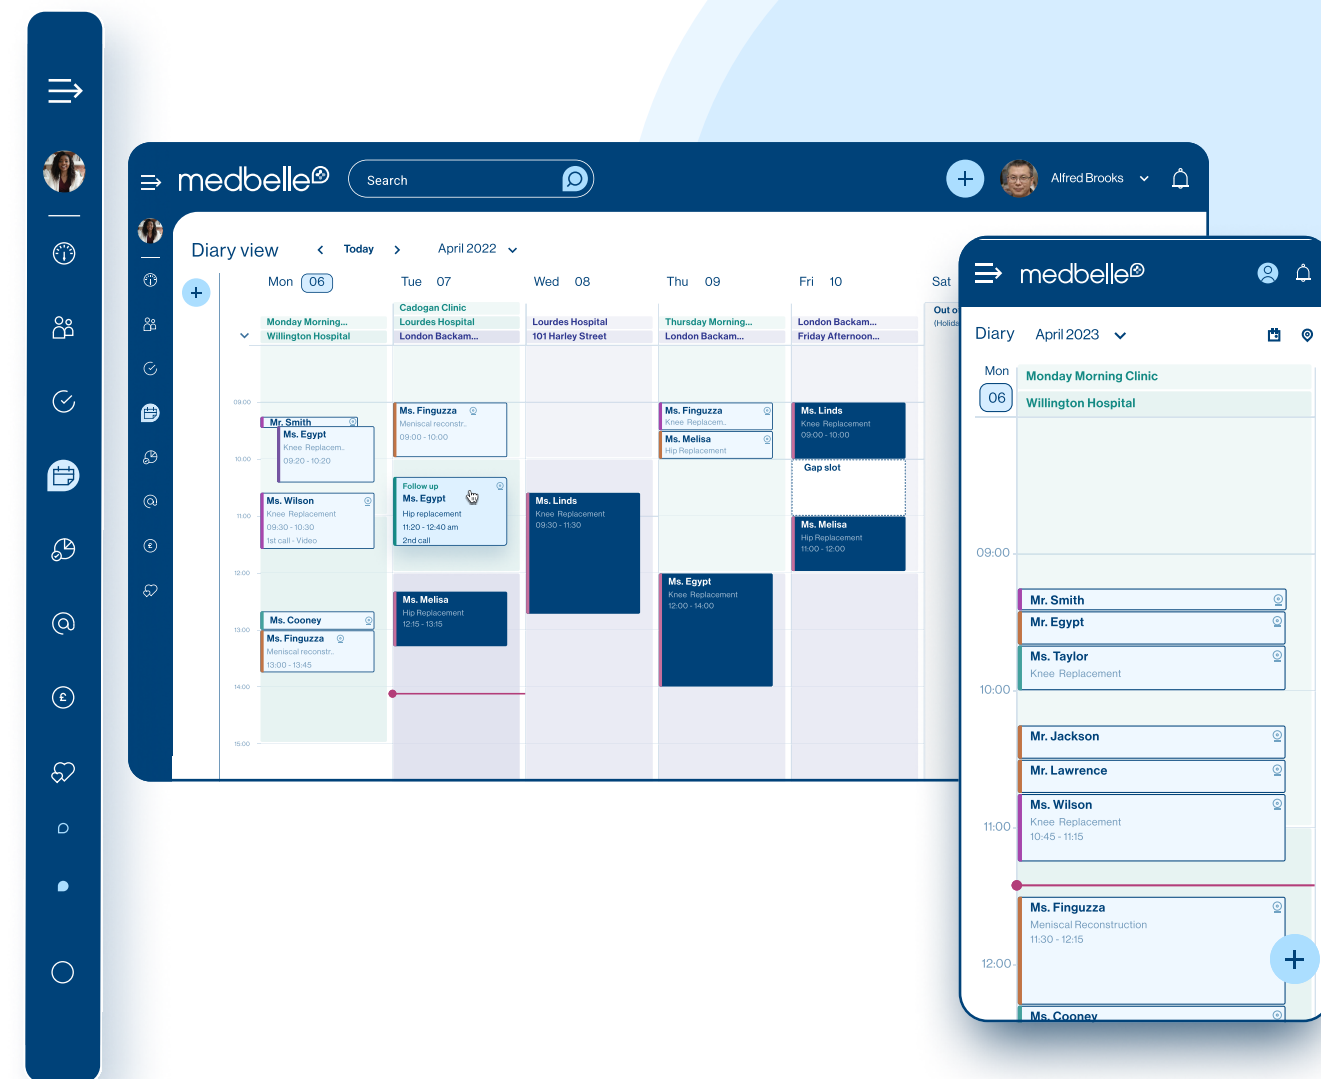

Additional revenue and staff support with Medbelle back-office as a service helps you make the most of Medbelle's benefits.

No more wasted time

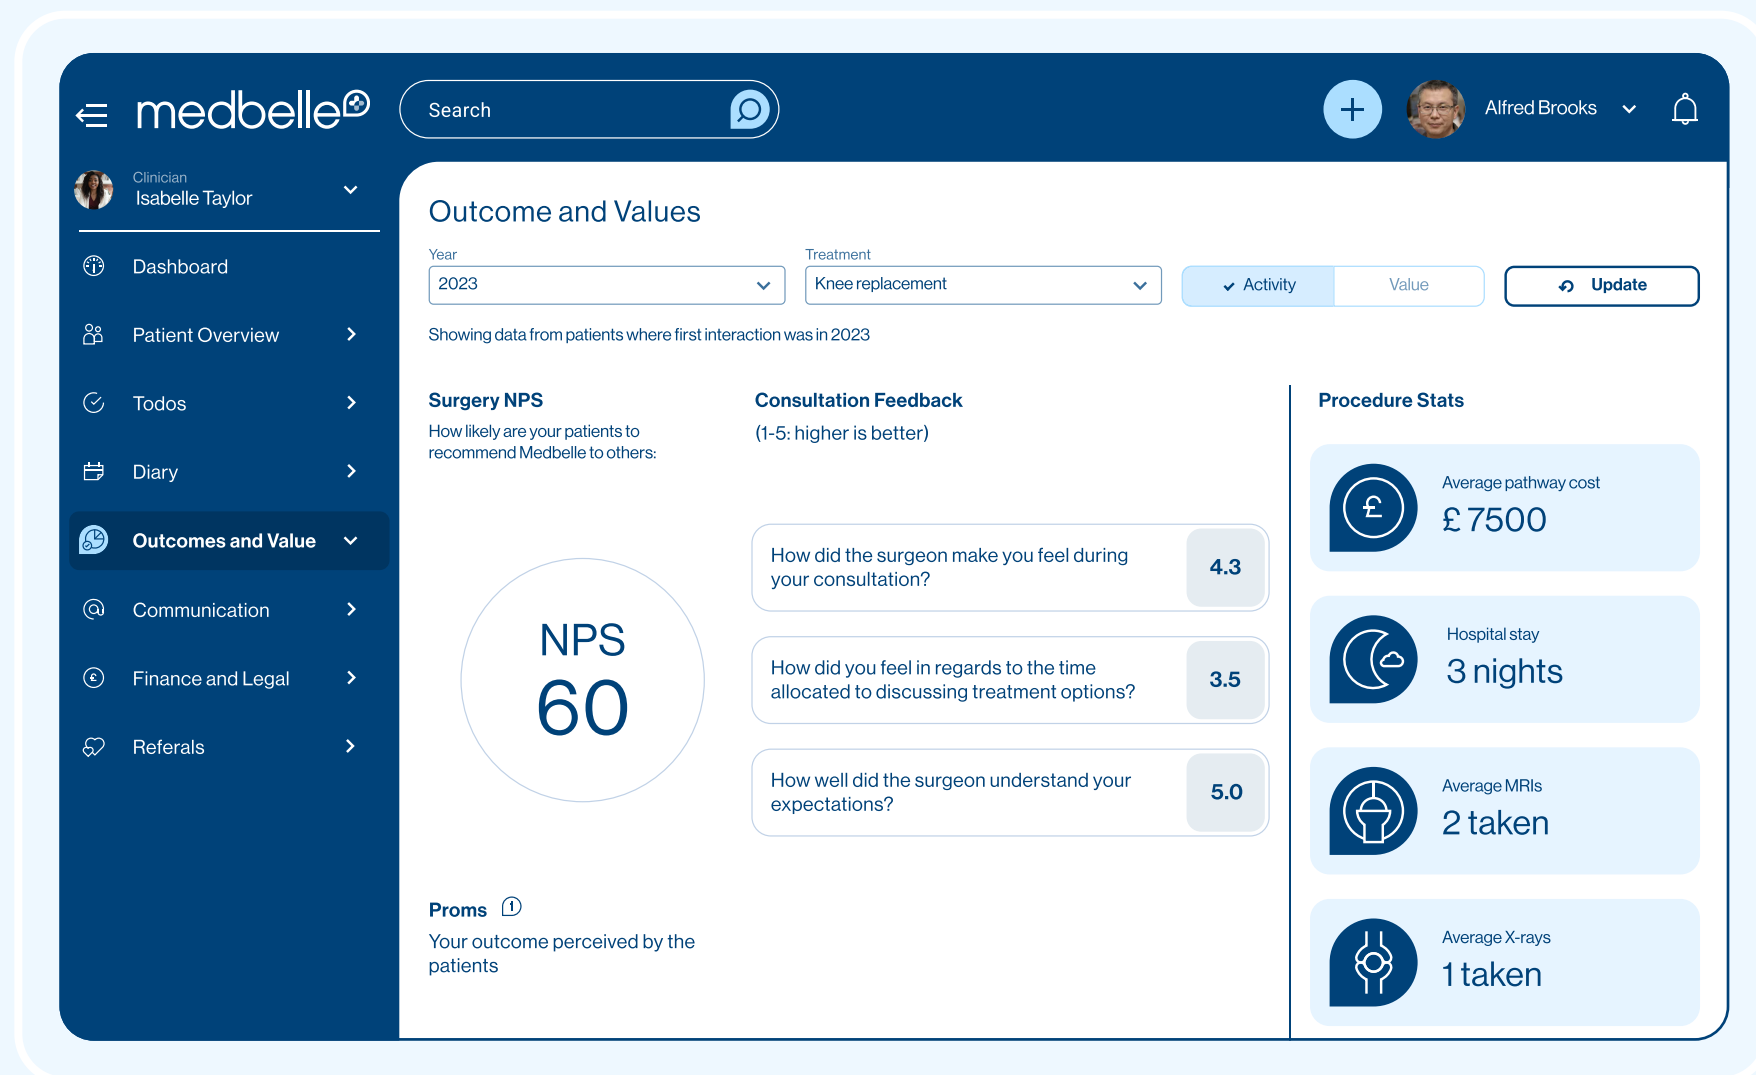

Consultants tell us they and their practice managers waste time switching between multiple tools, many of which were not specifically designed for healthcare practices.

If you only use the best, most appropriate equipment in your practice, why not use software that has been built specifically for healthcare practices and provides everything you need in one place?

We know what features are most valuable to practices, thanks to our panel of consultants and practice managers.

Bringing the benefits of *digitalisation* to healthcare

When it comes to logistics and admin, healthcare is stuck in the twentieth century.

Medbelle OS is designed to make value-based care possible. It brings the benefits of digitalisation to healthcare, for the benefit of consultants and patients alike

Always improving

As a digital hospital, we are always adapting and improving, using data and feedback to achieve the best outcomes in the most efficient way. We take the same approach to Medbelle OS.

New features are added regularly, and existing features are constantly improving, and it's all based on feedback we receive from consultants and practice managers.
